**Soil Classification in the Naban River Watershed National Nature Reserve** Maria Wolff, Lulu Zhang  
Document from the year 2010 in the subject Geography / Earth Science - Geology, Mineralogy, Soil Science, grade: -, Dresden Technical University (Institute of Soil Science and Site Ecology), course: -, language: English, abstract: Soil properties are not only influenced by geographical factors, such as parent material, location and latitude. Often differences in land uses (forest, rubber plantation, paddy field, bare land) are known to have specific effects on soil properties. In the context of the project Living Landscapes China (LILAC) these effects were evaluated and the characteristics of soil types under changing conditions in two transects (altitude and parent material in transect 1, land uses in transect 2) in the Naban River Watershed National Nature Reserve were classified. We used field investigations to classify the soil types, as well as laboratory analyses to quantify specific characteristics in samples, taken from the profiles. Soil physical (bulk density, water content, texture) and chemical parameters (total contents of carbon, nitrogen and macro nutrients, ECEC) were investigated. While differences in altitude did not seem to have profound influences on the soils, effects of land uses were pronounced especially in the first 10 to 20 cm of soil profiles. Soils under forests contain between 1.3 % - 2 % SOC and 0.15 % - 0.17 % TN in the Ah horizon. With contents of 1.2 % SOC and 0.11 % TN (Ah horizon) the profile under agricultural use (paddy rice) clearly contains less SOC and TN than the forest profiles. Fertilization also seemed to have an influence resulting in higher contents of Ca (6 - 12 times) and Mg (up to 4 times) for the topsoil as well as a higher effective CEC (7.9 - 9.3 cmolc/kg) for subsoil horizons of the paddy field compared to forest and rubber sites. The profile under bare land (transect 1) showed higher leaching of nutrients due to the missing soil cover. Thus, Al and Fe contents were enriched, while the effective CEC (5.1 cmolc/kg

### **From reader reviews:**

#### **Erin Wright:**

With other case, little men and women like to read book Soil Classification in the Naban River Watershed National Nature Reserve. You can choose the best book if you appreciate reading a book. Providing we know about how is important a new book Soil Classification in the Naban River Watershed National Nature Reserve. You can add information and of course you can around the world with a book. Absolutely right, due to the fact from book you can understand everything! From your country till foreign or abroad you will end up known. About simple point until wonderful thing you are able to know that. In this era, we are able to open a book or searching by internet unit. It is called e-book. You should use it when you feel bored to go to the library. Let's study.

#### **William Harris:**

In this 21st hundred years, people become competitive in each and every way. By being competitive today, people have do something to make these individuals survives, being in the middle of the actual crowded place and notice by surrounding. One thing that oftentimes many people have underestimated it for a while is reading. That's why, by reading a publication your ability to survive boost then having chance to stand up than other is high. For yourself who want to start reading any book, we give you this specific Soil Classification in the Naban River Watershed National Nature Reserve book as basic and daily reading book. Why, because this book is usually more than just a book.

#### **Sheri Combs:**

Can you one of the book lovers? If yes, do you ever feeling doubt when you are in the book store? Try to pick one book that you find out the inside because don't ascertain book by its deal with may doesn't work the following is difficult job because you are scared that the inside maybe not since fantastic as in the outside appearance likes. Maybe you answer is usually Soil Classification in the Naban River Watershed National Nature Reserve why because the wonderful cover that make you consider in regards to the content will not disappoint an individual. The inside or content is definitely fantastic as the outside or maybe cover. Your reading 6th sense will directly guide you to pick up this book.

#### **Wanda Hardin:**

You could spend your free time to see this book this e-book. This Soil Classification in the Naban River Watershed National Nature Reserve is simple to bring you can read it in the playground, in the beach, train as well as soon. If you did not include much space to bring the printed book, you can buy the actual e-book. It is make you better to read it. You can save the actual book in your smart phone. Consequently there are a lot of benefits that you will get when you buy this book.
