Electrodynamics of Solids: Optical Properties of Electrons in Matter Martin Dressel, George Grüner
In this book the authors thoroughly discuss the optical properties of solids, with a focus on electron states and their response to electrodynamic fields. Their review of the propagation of electromagnetic fields and their interaction with condensed matter is followed by a discussion of the optical properties of metals, semiconductors, and superconductors. Theoretical concepts, measurement techniques and experimental results are covered in three interrelated sections. The volume is intended for use by graduate students and researchers in the fields of condensed matter physics, materials science, and optical engineering.
