**\*\* This disc is for Computer Use Only \*\***

The number of beekeepers has declined dramatically over the last 10 years making "Backyard Beekeeping" more attractive to those who believe in growing their own organics foods such as homesteaders, people in sparsely populated areas and preppers.

Bees are crucial to sustainable living far beyond honey production. There are also a myriad of products and resources made from this small little honey bee! The best thing about honey is also that it never spoils! Honey bee products are sought after worldwide.

Growers and farmers well know the bee's importance to high performing crops and pasture. Even crops that are intended to be self-pollinating perform better if pollinated by bees.

Honey has renowned antiseptic properties, is keenly sought for use in products such as wound dressings.

Roughly one third of everything we eat is pollinated by bees. Many of our crops would not be viable without bee pollination - with an important role also played by bumble bees. Orchardists pay for hives to be located on their properties - a cost which varies depending on the crop but could range from \$75 to \$150 per hive.

This collection was designed to greatly assist anyone interested in beekeeping. We provide instruction books, guides and plans to build and maintain your own bee hives.
