Multiple-Criteria Decision Making: Concepts, Techniques, and Extensions (Mathematical Concepts and Methods in Science and Engineering) Po-Lung Yu

This book is an outgrowth of formal graduate courses in multiple-criteria decision making (MCDM) that the author has taught at the University of Rochester, University of Texas at Austin, and University of Kansas since 1972. The purpose is, on one hand, to offer the reader an integral and systematic view of various concepts and techniques in MCDM at an "introductory" level, and, on the other hand, to provide a basic conception of the human decision mechanism, which may improve our ability to apply the techniques we have learned and may broaden our mind for modeling human decision making. The book is written with a goal in mind that the reader should be able to assimilate and benefit from most of the concepts in the book if he has the mathematical maturity equivalent to a course in operations research or optimization theory. Good training in linear and nonlinear programming is sufficient to digest, perhaps easily, most of the concepts in the book.

From reader reviews:

Clyde Harlan:

Now a day people who Living in the era wherever everything reachable by interact with the internet and the resources inside can be true or not demand people to be aware of each facts they get. How individuals to be smart in acquiring any information nowadays? Of course the answer then is reading a book. Examining a book can help people out of this uncertainty Information especially this Multiple-Criteria Decision Making: Concepts, Techniques, and Extensions (Mathematical Concepts and Methods in Science and Engineering) book because this book offers you rich details and knowledge. Of course the knowledge in this book hundred pct guarantees there is no doubt in it you may already know.

Suzanne Cicero:

The guide untitled Multiple-Criteria Decision Making: Concepts, Techniques, and Extensions (Mathematical Concepts and Methods in Science and Engineering) is the publication that recommended to you you just read. You can see the quality of the book content that will be shown to you. The language that author use to explained their way of doing something is easily to understand. The writer was did a lot of investigation when write the book, therefore the information that they share for you is absolutely accurate. You also can get the e-book of Multiple-Criteria Decision Making: Concepts, Techniques, and Extensions (Mathematical Concepts and Methods in Science and Engineering) from the publisher to make you a lot more enjoy free time.

Richard Bennett:

Is it anyone who having spare time after that spend it whole day by simply watching television programs or just lying down on the bed? Do you need something totally new? This Multiple-Criteria Decision Making: Concepts, Techniques, and Extensions (Mathematical Concepts and Methods in Science and Engineering) can be the answer, oh how comes? A book you know. You are therefore out of date, spending your time by reading in this brand new era is common not a nerd activity. So what these publications have than the others?

Jack Murray:

A lot of publication has printed but it is unique. You can get it by online on social media. You can choose the best book for you, science, witty, novel, or whatever by searching from it. It is called of book Multiple-Criteria Decision Making: Concepts, Techniques, and Extensions (Mathematical Concepts and Methods in Science and Engineering). You can include your knowledge by it. Without leaving behind the printed book, it could add your knowledge and make you actually happier to read. It is most important that, you must aware about publication. It can bring you from one destination for a other place.
